Attorney Docket Number: 2001-1400-RA

VERSION WITH MARKINGS TO SHOW CHANGES MADE

1. (Once Amended) A communication system for managing [electronic] messages, comprising:

means for retrievably storing at least one [a] message;

means for retrieving said at least one message;

means for transmitting said at least one message to a user; and

at least one [a] motion detector for detecting [the presence of a user] motion within a selected range of said communication system, wherein said means for retrievably storing said message, said means for retrieving said message and said means for transmitting said message to a user are in communication with said at least one motion detector, and wherein said at least one motion detector [detects the presence of a user, said motion detector communicates the presence] transmits a signal upon detection of motion within said selected range of said communication system and activates said means for transmitting said at least one message.
